H.

H (āch), the eighth letter of the English alphabet, is classed among the consonants, and is formed with the mouth organs in the same position as that of the succeeding vowel. It is used with certain consonants to form digraphs representing sounds which are not found in the alphabet, as *sh*, *th*, *th*, as in *shall*, *thing*, *thine* (for *sh* see § 274), also, to modify the sounds of some other letters, as when placed after *c* and *p*, with the former of which it represents a compound sound like that of *tsh*, as in *charm* (written also *tch* as in *catch*), with the latter, the sound of *f*, as in *phase*, *phantom*. In some words, mostly derived or introduced from foreign languages, *h* following *c* and *g* indicates that those consonants have the hard sound before *e*, *i*, and *y*, as in *chemistry*, *chiromancy*, *chyle*, *Ghent*, *Ghibelline*, etc.; in some others, *ch* has the sound of *sh*, as in *chicane*. See *Guide to Pronunciation*, §§ 153, 179, 181-3, 237-8.

The name (aitch) is from the French *ache*; its form is from the Latin, and this from the Greek H, which was used as the sign of the spiritus asper (rough breathing) before it came to represent the long vowel, Gr. η. Syn. — HANDSOME, PRETTY. *Pretty* applies to things comparatively small, which please by their delicacy and grace; as, a *pretty* girl, a *pretty* flower, a *pretty* cottage. *Handsome* rises higher, and is applied to objects on a larger scale. We admire what is *handsome*, we are pleased with what is *pretty*. The word is connected with *hand*, and has thus acquired the idea of training, cultivation, symmetry, and proportion, which enters so largely into our conception of *handsome*. Thus Drayton makes mention of *handsome* players, meaning those who are well trained; and hence we speak of a man's having a *handsome* address, which is the result of culture; of a *handsome* horse or dog, which implies well proportioned limbs; of a *handsome* face, to which, among other qualities, the idea of proportion and a graceful contour are essential; of a *handsome* tree, and a *handsome* house or villa. So, from this idea of proportion or suitableness, we have, with a different application, the expressions, a *handsome* fortune, a *handsome* offer.

Why does my blood thus muster to my *heart*? *Shak.*

☞ In adult mammals and birds, the heart is four-chambered, the right auricle and ventricle being completely separated from the left auricle and ventricle; and the blood flows from the systemic veins to the right auricle, thence to the right ventricle, from which it is forced to the lungs, then returned to the left auricle, thence passes to the left ventricle, from which it is driven into the systemic arteries. See *Illust.* under AORTA. In fishes there are but one auricle and one ventricle, the blood being pumped from the ventricle through the gills to the system, and thence returned to the auricle. In most amphibians and reptiles, the separation of the auricles is partial or complete, and in reptiles the ventricles also are separated more or less completely.

The so-called *lymph hearts*, found in many amphibians, reptiles, and birds, are contractile sacs, which pump the lymph into the veins.

These words all agree in the idea of affording relief or support to a person under difficulties. *Help* turns attention especially to the source of relief. If I fall into a pit, I call for *help*; and he who *helps* me out does it by an act of his own. *Aid* turns attention to the other side, and supposes cooperation on the part of him who is relieved; as, he *aided* me in getting out of the pit; I got out by the *aid* of a ladder which he brought me. *Assist* has a primary reference to relief afforded by a person who "stands by" in order to relieve. It denotes both *help* and *aid*. Thus, we say of a person who is weak, I *assisted* him upstairs, or, he mounted the stairs by my *assistance*. When *help* is used as a noun, it points less distinctively and exclusively to the source of relief, or, in other words, agrees more closely with *aid*. Thus we say, I got out of a pit by the *help* of my friend.

WALRUS.] **1.** (*Zoöl.*) A hoofed quadruped of the genus *Equus*; especially, the domestic horse (*E. caballus*), which was domesticated in Egypt and Asia at a very early period. It has six broad molars, on each side of each jaw, with six incisors, and two canine teeth, both above and below. The mares usually have the canine teeth rudimentary or wanting. The horse differs from the true asses, in having a long, flowing mane, and the tail bushy to the base. Unlike the asses it has callosities, or chestnuts, on all its legs. The horse excels in strength, speed, docility, courage, and nobleness of character, and is used for drawing, carrying, bearing a rider, and like purposes.

☞ Many varieties, differing in form, size, color, gait, speed, etc., are known, but all are believed to have been derived from the same original species. It is supposed to have been a native of the plains of Central Asia, but the wild species from which it was derived is not certainly known. The feral horses of America are domestic horses that have run wild, and it is probably true that most of those of Asia have a similar origin. Some of the true wild Asiatic horses do, however, approach the domestic horse in several characteristics.

Several species of fossil horses (*Equus*) are known from the later Tertiary formations of Europe and America. The fossil species of other genera of the family *Equidæ* are also often called *horses*, in a general sense.

Syn. — However, At least, Nevertheless, Yet. These words, as here compared, have an adversative sense in reference to something referred to in the context. *However* is the most general, and leads to a final conclusion or decision. Thus we say, the truth, *however,* has not yet fully come out; *i. e.,* such is the speaker's conclusion in view of the whole case. So also we say, *however,* you may rely on my assistance to that amount; *i. e.,* at all events, whatever may happen, this is my final decision. *At least* is adversative in another way. It points out the utmost concession that can possibly be required, and still marks the adversative conclusion; as, *at least,* this must be done; whatever may be our love of peace, we must *at least* maintain the rights of conscience. *Nevertheless* denotes that though the concession be fully made, it has no bearing on the question; as, *nevertheless,* we must go forward. *Yet* signifies that however extreme the supposition or fact conceded may be, the consequence which might naturally be expected does not and will not follow; as, though I should die with thee, *yet* will I not deny thee; though he slay me, *yet* will I trust in him. I.

I (ī). **1.** I, the ninth letter of the English alphabet, takes its form from the Phœnician, through the Latin and the Greek. The Phœnician letter was probably of Egyptian origin. Its original value was nearly the same as that of the Italian I, or long *e* as in *mete*. Etymologically I is most closely related to *e, y, j, g;* as in *dint, dent*; *beverage*, L. *bĭbere*; E. *kin*, AS. *cynn*; E. *thin*, AS. *þynne*; E. *dominion, donjon, dungeon.*

In English I has two principal vowel sounds: the long sound, as in *pine, ice;* and the short sound, as in *pin.* It has also three other sounds: (*a*) That of *e* in *term*, as in *thirst.* (*b*) That of *e* in *mete* (in words of foreign origin), as in *machine, pique, regime.* (*c*) That of consonant *y* (in many words in which it precedes another vowel), as in *bunion, million, filial, Christian*, etc. It enters into several digraphs, as in *fail, field, seize, feign, friend;* and with *o* often forms a proper diphthong, as in *oil, join, coin.*

See *Guide to Pronunciation*, §§ 98–106.

The dot which we place over the small or lower case *i* dates only from the 14th century. The sounds of I and J were originally represented by the same character, and even after the introduction of the form J into English dictionaries, words containing these letters were, till a comparatively recent time, classed together.

2. In our old authors, *I* was often used for *ay* (or *aye*), yes, which is pronounced nearly like it.

3. As a numeral, I stands for 1, II for 2, etc

-ics (-Iks). A suffix used in forming the names of certain sciences, systems, etc., as *acoustics*, *mathematics*, *dynamics*, *statistics*, *politics*, *athletics*.

☞ The names of sciences ending in *ics*, as *mathematics*, *mechanics*, *metaphysics*, *optics*, etc., are, with respect to their form, nouns in the plural number. The plural form was probably introduced to mark the complex nature of such sciences; and it may have been in imitation of the use of the Greek plurals τὰ φυσικά, τὰ μετὰ τὰ φυσικά, τὰ ἀναλυτικά, τὰ ἠθικά, etc., to designate parts of Aristotle's writings. Previously to the present century, nouns ending in *ics* were construed with a verb or a pronoun in the plural; but it is now generally considered preferable to treat them as singular. In German we have *die Mathematik*, *die Mechanik*, etc., and in French *la métaphysique*, *la optique*, etc., corresponding to our *mathematics*, *mechanics*, *metaphysics*, *optics*, etc.

Mathematics have for their object the consideration of whatever is capable of being numbered or measured. *John Davidson.*

Our simple apprehension of corporeal objects, if present, is sense; if absent, is *imagination*. *Glanvill*

2. The representative power, the power to reconstruct or recombine the materials furnished by direct apprehension, the complex faculty usually termed the *plastic* or *creative* power, the fancy.

The *imagination* of common language — the productive *imagination* of philosophers — is nothing but the representative process plus the process to which I would give the name of the "comparative" *Sir W Hamilton*

The power of the mind to decompose its conceptions, and to recombine the elements of them at its pleasure, is called its faculty of *imagination* *I. Taylor.*

The business of conception is to present us with an exact transcript of what we have felt or perceived. But we have

moreover a power of modifying our conceptions, by combining the parts of different ones together, so as to form new wholes of our own creation. I shall employ the word *imagination* to express this power. *Stewart.*

3. The power to recombine the materials furnished by experience or memory, for the accomplishment of an elevated purpose; the power of conceiving and expressing the ideal.

> The lunatic, the lover, and the poet
> Are of *imagination* all compact. . .
> The poet's eye, in a fine frenzy rolling,

4. A mental image formed by the action of the imagination as a faculty; a conception; a notion. *Shak.*

Syn. — Conception; idea; conceit; fancy; device; origination; invention; scheme; design; purpose, contrivance. — IMAGINATION, FANCY. These words have, to a great extent, been interchanged by our best writers, and considered as strictly synonymous. A distinction, however, is now made between them which more fully exhibits their nature. Properly speaking, they are different exercises of the same general power — the plastic or creative faculty. *Imagination* consists in taking parts of our conceptions and combining them into new forms and images more select, more striking, more delightful, more terrible, etc., than those of ordinary nature. It is the higher exercise of the two. It creates by laws more closely connected with the reason; it has *strong emotion* as its actuating and formative cause; it aims at results of a definite and weighty character. Milton's fiery lake, the debates of his Pandemonium, the exquisite scenes of his Paradise, are all products of the imagination. *Fancy* moves on a lighter wing; it is governed by laws of association which are more remote, and sometimes arbitrary or capricious. Hence the term *fanciful*, which exhibits fancy in its wilder flights. It has for its actuating spirit feelings of a lively, gay, and versatile character; it seeks to please by unexpected combinations of thought, startling contrasts, flashes of brilliant imagery, etc. Pope's Rape of the Lock is an exhibition of fancy which has scarcely its equal in the literature of any country. — "This, for instance, Wordsworth did in respect of the words 'imagination' and 'fancy.' Before he wrote, it was, I suppose, obscurely felt by most that in 'imagination' there was more of the earnest, in 'fancy' of the play of the spirit; that the first was a loftier faculty and gift than the second, yet for all this the words were continually, and not without loss, confounded. He first, in the preface to his Lyrical Ballads, rendered it henceforth impossible that any one, who had read and mastered what he has written on the two words, should remain unconscious any longer of the important difference between them." *Trench.*

The same power, which we should call *fancy* if employed on a production of a light nature, would be dignified with the title of *imagination* if shown on a grander scale. *C. J. Smith*

It consists of a coil or helix of stout insulated copper wire, surrounded by another coil of very fine insulated wire, in which a momentary current is induced, when a current (as from a voltaic battery), passing through the inner coil, is made, broken, or varied. The inner coil has within it a core of soft iron, and is connected at its terminals with a condenser — called also *inductorium*, and *Ruhmkorff's coil* — **Induction pipe, port,** *or* **valve**, a pipe, passageway, or valve, for leading or admitting a fluid to a receiver, as steam to an engine cylinder, or water to a pump. — **Magnetic induction**, the action by which magnetic polarity is developed in a body susceptible to magnetic effects when brought under the influence of a magnet. — **Magneto-electric induction**, the influence by which a magnet excites electric currents in closed circuits.

This last is the *inductive method* of Bacon. It ascends from the parts to the whole, and forms, from the general analogy of nature, or special presumptions in the case, conclusions which have greater or less degrees of force, and which may be strengthened or weakened by subsequent experience and experiment. It relates to actual existences, as in physical science or the concerns of life. *Logical induction* is founded on the necessary laws of thought; *philosophical induction*, on the interpretation of the indications or analogy of nature.
Syn. — Deduction. — INDUCTION, DEDUCTION. In *induction* we observe a sufficient number of individual facts, and, on the ground of analogy, extend what is true of them to others of the same class, thus arriving at *general* principles or laws. This is the kind of reasoning in physical science. In *deduction* we begin with a *general* truth, which is already proven or provisionally assumed, and seek to connect it with some particular case by means of a middle term, or class of objects, known to be equally connected with both. Thus, we bring down the general into the particular, affirming of the latter the distinctive qualities of the former. This is the syllogistic method. By *induction* Franklin established the identity of lightning and electricity, by *deduction* he inferred that dwellings might be protected by lightning rods.
